Example: Handling Directories and Files

Summary

The **demo.py** file in this repository shows how to use several techniques to manage directories of files and to handle file pathnames. It also shows how to use Pandas to read Excel files and to read and write Stata databanks, and how to use GeoPandas to read shapefiles with special internal structures.

Input Data

The input files are included in the repository.

Deliverables

None. This is an example only and there's **nothing due**.

Instructions

1. Browse the demo.py to see what techniques it demonstrates.
